

Dickson Lo

Senior Product Manager | SaaS & Platform Products | AI Workflow Automation

Product manager with 10 years of experience translating complex business processes into shippable software products, admin systems, App/Web journeys, and AI-assisted development workflows. Led a five-person product and design team to launch a 0-to-1 platform within four months. More recently, independently built an AI-agent product development workflow that turns requirements into PRDs, wireframes, design-system mappings, and high-fidelity prototypes, shortening the path from concept to a testable solution.

Taipei, Taiwan | dicksonlo901019@gmail.com | Native Chinese and Cantonese | Intermediate English | Currently seeking opportunities

Core Competencies

Product Strategy & Delivery	0-to-1 launches, roadmap planning, PRD/FRD/BRD, user journeys, modular requirements
SaaS & Admin Systems	Management consoles, approval flows, permission models, account operations, workflow tooling
AI Product Workflows	Agentic workflows, prompt engineering, IR mapping, DS Dictionary, prompt-to-code prototyping
Platform Architecture	Account models, data consistency, risk controls, system states, cross-functional logic alignment
UX & Prototyping	Figma, Axure, wireframes, high-fidelity prototypes, design-to-code handoff
Tools & Technical Fluency	Jira, Postman, WebSocket/REST API testing, VS Code, React/Tailwind prototypes

Professional Experience

Xchanger Co., Ltd. (Gamania Group subsidiary) - Web Product Manager

AI Workflow Automation / Web Platform / NFT Products | Jul 2025 - Jun 2026 | Taipei

- Independently built an Agentic Workflow product automation engine, decomposing PM, UI/UX, front-end, and Figma responsibilities into collaborative AI workflows.
- Designed a single-LLM routing architecture with prompt switching, state handoffs, folder standards, and phased deliverables, enabling requirements to produce consistent PRDs, wireframes, semantic mappings, and high-fidelity prototypes.
- Defined IR mapping and DS Dictionary constraints to reduce LLM hallucinations and align AI-generated UI/prototypes with engineering semantics and standards.
- Led Web platform product planning across user connectivity, signing flows, asset states, data-consistency monitoring, and security workflows for non-custodial withdrawals.

Asia Pacific Manyu Technology - Product Manager to Product Lead

Platform Products / Trading & Operations Systems / Product Team Lead | Jul 2022 - Jul 2025 | Taipei

- Promoted from Product Manager to Product Lead, leading a five-person product and design team responsible for complex trading platforms, admin systems, and operations tooling.
- Delivered a 0-to-1 platform launch within four months, defining account architecture, approval flows, a rebate engine, routing, risk-control systems, and internal operations tooling.
- Led modular PRD design and a technical pre-review process, achieving 100% requirement componentization and 80% complex-logic alignment to reduce development blockers and improve delivery efficiency.
- Designed a multi-account asset architecture, one-to-six-level dynamic approval flows, platform operations accounts, critical configuration-change processes, and recurring data snapshots, improving operational control and audit transparency.
- Led Web/App automation-strategy tooling across parameter configuration, state machines, risk alerts, calculation logic, order splitting, admin queries, and customer-service visibility.
- Designed marketplace and routing flows covering third-party supplier aggregation, price protection, supply prioritization, account security controls, and cancellation-risk controls.

Narrow Pacific - Product Manager

App/Web Flow Planning | Account & E-commerce Products | 2021 - 2022

- Conducted market research and user interviews, leading App/Web flow planning and prototype design.
- Owned planning artifacts for the Hash Card product, including FRDs, Gantt charts, issue tracking, Kanban boards, mind maps, and wireframes.

INNO-OZ - Product / Project Manager

Client Projects | E-commerce / Social / IoT / Internal Tools | 2016 - 2021

- Led five to six client projects from planning through launch across e-commerce tools, social media, industry internal tools, IoT tools, and end-user apps.
- Produced FRDs, use cases, wireframes, prototypes, flowcharts, competitive product analyses, issue tracking, Kanban boards, mind maps, and Gantt charts.
- Standardized API documentation workflows to improve development collaboration.
- Representative work included the Shopify single-product-page system, Yulon Group In-house App, BESV Sport App, NTPU Carbon Assets, Auction House App, and Tracker App.

Selected Projects

AI Agent Product Development Workflow

Introduced AI agents to reshape product development, defining PM, UI/UX, Figma Automation Engineer, and Front-End Engineer roles that convert business requirements into PRDs, wireframes, semantic mappings, and high-fidelity prototypes.

AI Workflow, LLM, Prompt Engineering, Design-to-Code

0-to-1 Platform & Operations System

Led a five-person product/design team to launch a complex platform within four months, covering account models, approval workflows, risk controls, an internal admin console, data snapshots, and reconciliation logic.

Platform PM, Admin System, Workflow, 0-to-1

Automated Strategy Tool

Designed a Web/App automated-strategy product covering strategy lifecycle, parameter configuration, state management, risk alerts, calculation models, order handling, admin analytics, and customer-service queries.

Complex Logic, State Machine, Risk UX, Web/App

Shopify CMS Template Management Tool

Designed a 22-page Axure prototype covering product settings, template management, search and no-result states, preview, delete, apply-product popups, and create/edit flows.

SaaS, E-commerce, CRUD, Axure

Auction House Mobile App

Planned the information architecture and wireframes for a marketplace app covering auction schedules, online/offline lots, bidder registration, filters, account center, saved items, and valuation requests.

Marketplace, Mobile App, IA, User Flow

BESV Sport App / IoT Product

Contributed to product planning for IoT sports and tracking apps, producing FRDs, use cases, prototypes, issue tracking, flowcharts, mind maps, and wireframes.

IoT, App Product, FRD, Delivery

Portfolio

- AI Agent Product Development Workflow: [Login / Registration Prototype](#), [CEX x AI Landing Page](#)
- Xchanger NFT Platform Feature Prototypes: [Become-a-Seller Concept](#), [Collection Optimization Prototype](#)
- Shopify Product Page System: [Portfolio](#)
- Auction House App: [Portfolio](#)
- BESV Sport App: [App Store](#)
- NTPU Carbon Assets: [Official Website](#)
- Tracker App: [Portfolio](#)
- Yulon Group In-house App: [Portfolio](#)
